

Fall Care 10-0-8 with added copper

GUARANTEED ANALYSIS

Total Nitrogen (N)	10.00%
7.6% Soluble Nitrogen	
2.4% Insoluble Nitrogen	
Soluble Potash (K ₂ O)	8.00%
Copper (Cu)	0.65%
Iron (Fe)	1.50%

Derived from: Calcium Carbonate, Ammonium Sulfate, Potassium Sulfate, Milorganite, and Copper Sulfate

CONDITIONS OF SALE

Seller warrants that the product conforms to its chemical description and is reasonably fit for the purposes stated on the label when used in accordance with directions under normal conditions of use, but neither this warranty nor any other warranty of fitness for a particular purpose, expressed or implied, extends to the use of this product contrary to label instructions or under abnormal conditions, or under conditions not reasonably foreseeable to seller and buyer assumes the risk of any such use. Seller shall not be responsible for incidental or consequential damages, if any resulting from a breach of warranty.

GENERAL INFORMATION

Fall Care is a winterizing fertilizer designed to help lawns store energy in the fall by building a larger root system. This process will help lawns emerge from winter in a healthier condition. Fall Care is manufactured using proprietary products that enhance the utilization of phosphorus in the soil. Phosphorus is a key mineral in aiding photosynthesis and the root-building process. Fall Care also helps protect the plant against many winter fungal diseases. Fall Care is a low-nitrogen formula. Excess nitrogen uses up plant energy that is needed to promote growth. For areas with low phosphorus levels the GreenGuard Winterizer 8-9-6 may be a better choice.

DIRECTIONS FOR USE

Home and Commercial Properties:

For best results apply 260 lbs./per acre or 6 lbs./1000 sq. ft. about mid-September. This will give the lawn time to take in the nutrients and build a larger root system.

General campus and Athletic Turf:

Under high use or high wear conditions apply 250 lbs./acre to the general areas before school starts in the fall. Athletic Fields used in the fall should be treated after the last game with 300 lbs./acre or 7 lbs./1000 sq. ft.
