

Game Bird Feed & Cover Mix

Game Bird Feed & Cover Mix is formulated to attract, protect, and feed all types of game birds. It provides good season-long cover and food for the birds, yet allows fields to be walked and hunted. It should be planted like a grain crop at 30 to 40 lbs. per acre.

Game Bird Feed & Cover Mix

Annual feed and cover for upper Midwest Game birds. Seeding rate is 30 – 40 lbs. per acre.

- 40% Grain sorghum
- 40% Proso Millet
- 20% Japanese or German Millet

Game Bird Cover Mix

Perennial cover for the upper Midwest game birds. Seeding Rate 20 – 30 lbs. per acre.

- 40% Little Bluestem
- 20% Slender Wheat Grass
- 20% Canada Wild Rye
- 20% Switch Grass

Seedbed Preparation

For best results incorporate GreenGuard Soil Prep into planting areas which should be tilled or dragged until the surface is level. A good garden fertilizer like GreenGuard Vegetable & Flower Fertilizer will speed up establishment, and should be applied 30 days after seeding. You should avoid standard garden fertilizers because they contain higher levels of salts and excess nitrogen.

Maintenance: For best result plant feed lot adjacent to cover. To avoid driving over cover to replant feed never mix Game Bird Feed Mix with Game Bird Cover Mix.

Always plant Game Bird Cover Mix adjacent to established trees or shrub lines.
