

LOW MAINTENANCE

Low Maintenance

A Low Maintenance Lawn Formula

Low Maintenance is formulated to produce a quality lawn under a wide range of conditions. Low Maintenance was designed to reduce mowing, maintain ground cover under stress, and requires less fertilizer and watering. Atlantis is a unique Kentucky bluegrass variety that brings genetic diversity, wide adaptability, density, and persistence to our low maintenance mix. Combining improved fine fescue varieties with Atlantis produces an excellent ground cover when maintained at 3" or higher during the growing season. Low Maintenance is intended for low traffic areas and will not hold up under high traffic conditions.

Seed Mix

- 30% Atlantis Kentucky bluegrass
- 20% Boreal Creeping Red Fescue
- 20% Epic Creeping Red Fescue
- 20% Turf-Type Perennial Ryegrass
- 10% Culumbra Chewings Fescue

Characteristics

Fast establishing	Drought tolerant	Low fertility needs	Low water usage
Winter-hardy	Good Color	Fine textured leaves	

General Turf Care

Low Maintenance Mix was designed to create a lawn that needs less mowing, watering and other maintenance to maintain healthy ground cover. For best performance Low Maintenance should be maintained at 3" or higher during the warm part of the growing season. Low Maintenance lawn mix is formulated for low traffic areas and will survive on very little water or fertilizer under these conditions. If watering is used be sure to water longer to produce moist ground 4-6" below the surface.

Fertilizing & Watering

Newly seeded Low Maintenance Lawns should be watered and fertilized the same as any new lawn. If the lawn is damaged from summer stress, excess traffic, or winter damage apply GreenGuard Lawn Starter/Builder Fertilizer according to recommendations until the lawn is repaired. Low Maintenance Lawns should receive Winterizer Fertilizer in the early days of September to maintain a healthy turf.

Mowing

Low Maintenance Mix should never be mowed shorter than 3 inches during the summer. Never remove more than 30 % of the height, this will maintain density and turf health. The most successful fall program is to reduce mowing height to 2 inches mid October, to better prevent spring disease infestation.

Seeding Rates

Before planting use Soil Prep Plus to improve root development and faster establishment.

New lawn: 200-250 lbs. /acre

Repairing: Use 2-3 lbs/1000 sq. ft. based on severity of damage.
