

ALL PURPOSE ALFALFA BASED HAY FORMULA

This mix is best suited to 2 and 3 cut rotations. It is an excellent choice for areas that dry slowly. Establishes best in moist, fertile areas.

Seed Mix

60% Vernal Alfalfa

10% Medium Red Clover

10% Climax Timothy

10% Bestfor Tetraploid Ryegrass

10% Sweet Tart Festulolium

Vernal Alfalfa

Vernal Alfalfa exhibits good winter hardiness, has moderate re-growth after cutting, is fine stemmed and has dark green leaves. Vernal is used mostly for hay production in medium rotation applications.

Medium Red Clover

Medium Red Clover provides an excellent source of energy, protein, and calcium required for weight gain.

Climax Timothy

Climax Timothy is later starting, but yields best in the spring as well as later in the season. It is a long lived perennial that takes haying and pasturing well. Timothy provides exceptional forage for all animals. Its greatest yields are in the spring, early summer, and again in the early fall.

Bestfor Tetraploid Ryegrass

Bestfor Perennial Ryegrass is a Tetraploid ryegrass known for its high forage quality and palatability. It is easy to establish and develops quickly. This ryegrass is better suited for pastures, because it has less cellulose and is easier to digest. It is also an excellent source of amino acids, and key vitamins and minerals.

Sweet Tart Festulolium

A very palatable grass that is high in energy and nutritional value. Festulolium is a cross between meadow fescue and perennial ryegrass. This cross captures the high palatability of forage quality identified with perennial ryegrass, yet improves winter-hardiness and consistent summer growth of the meadow fescue. Sweet Tart Festulolium will be the first grass eaten in the pasture and will provide improved digestion, protein, and minerals.

FORAGE MIXTURE

Recommended Seeding Rate

15-20 lbs per acre for best results.

Bag Size: 50 lbs Bags per Pallet: 40
