

AN ALL PURPOSE BLEND THAT WORKS WELL FOR GRAZING

A versatile, balanced legume and grass formula suitable to all types of livestock. This mixture will perform best in a wide range of soil conditions but will excel in a well drained, fertile soil.

Seed Mix

35% Vernal Alfalfa	10% Kemal Festulolium
25% Medium Red Clover	5% Alsike Clover
10% Climax Timothy	5% White Ladino Clover
10% Bestfor Tetraploid Ryegrass	

Vernal Alfalfa

Vernal Alfalfa exhibits good winter hardiness, has moderate re-growth after cutting, is fine stemmed and has dark green leaves. Vernal is used mostly for hay production in medium rotation applications.

Medium Red Clover

Medium Red Clover provides an excellent source of energy, protein, and calcium required for weight gain.

Climax Timothy

Climax Timothy is later starting, but yields best in the spring as well as later in the season. It is a long lived perennial that takes haying and pasturing well. Timothy provides exceptional forage for all animals. Its greatest yields are in the spring, early summer, and again in the early fall.

Bestfor Tetraploid Ryegrass

Bestfor Perennial Ryegrass is a Tetraploid ryegrass known for its high forage quality and palatability. It is easy to establish and develops quickly. This ryegrass is better suited for pastures, because it has less cellulose and is easier to digest. It is also an excellent source of amino acids, and key vitamins and minerals.

Kemal Festulolium

A very palatable grass that is high in energy and nutritional value. Festulolium is a cross between meadow fescue and perennial ryegrass. This cross captures the high palatability and forage quality identified with perennial ryegrass but also improves winter-hardiness and consistent summer growth of the meadow fescue. Festulolium will be the first grass eaten in the pasture and will provide improved digestion, protein, and minerals.

Alsike Clover

Alsike Clover is an easy to establish clover for poor quality soils. However, alsike clover is intolerant of drought and high temperatures. It provides a good source of energy, protein, and calcium required by livestock.

White Ladino Clover

White Ladino Clover is the most palatable of the clovers. It is a high protein food source that is persistent and easy to establish.

Recommended Seeding Rate

30-33 lbs per acre for best results.

Bag size: 50 lbs Bags per Pallet: 40
